## Chart comparissons

All our bird feet are manufactured for American species. This quick reference chart has been compiled as a basic guide.

Our reference number with a prefix BF relates to the American species. Where applicable we have listed the best suited British equivalent.

In some cases the American species will appear more than once in the list. This is because the American species will be very similar if not identical to the foot and tarsus measurement of the British species suggested. This also allows for gender sizing and indeed preference.

Please feel free to make further suggestions or perhaps corrections to the species comparisons and we will look into including them here.
